

# AWI-CM3 hands-on-course: Part 2 esm\_tools

Jan Streffing 08.09.2022

## 1) Why do we need ESM-Tools?

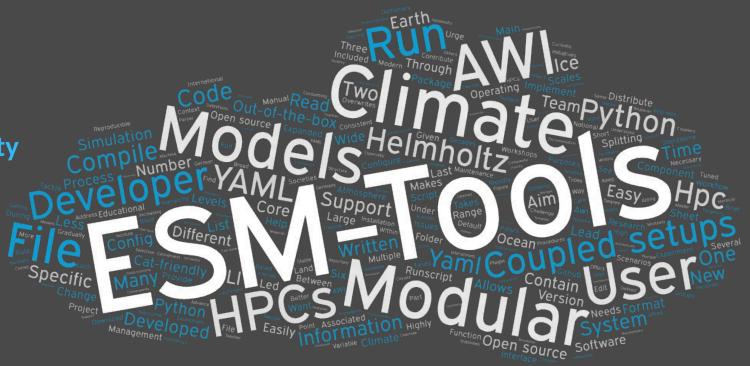

#### **Earth System Modelling Tools**

- Modular software infrastructure
  - Download
  - Configure/compile
  - Run simulations
  - Organize exp. output/restart
  - Calendar operations

- Standalone Earth system models
- ESM coupled setups
- in different HPC systems

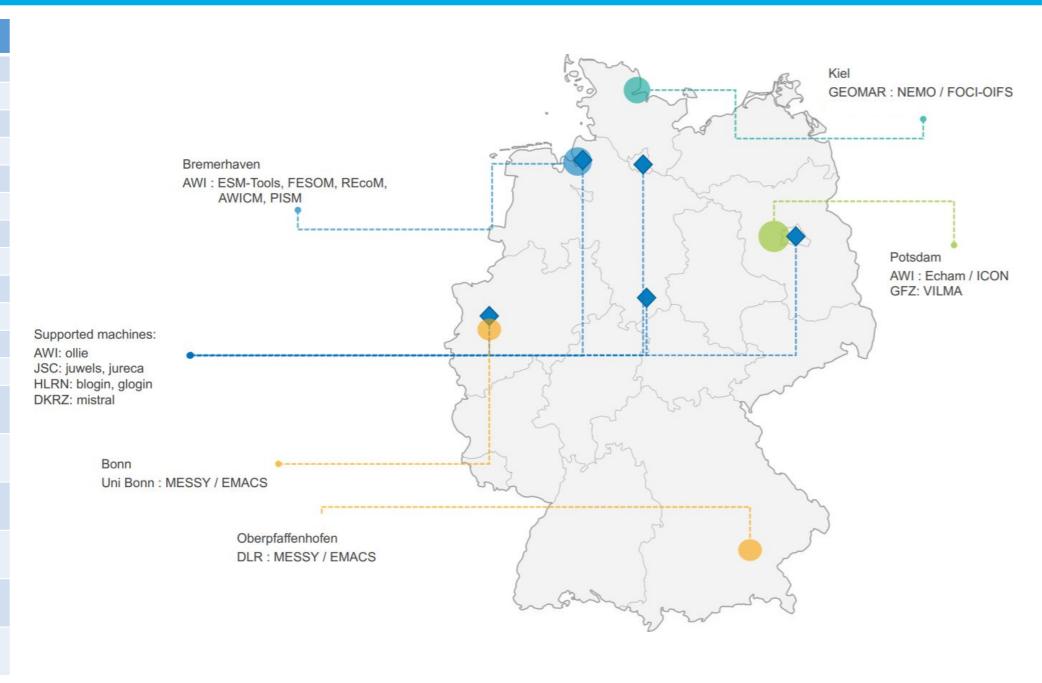

### **Advantages**

- Unified infrastructure for ESM modelling
- Eases consistent workflows and experiment reproducibility
- Easy to implement new models/coupled setups
- Identical simulation-folder structure across different models/simulations
- Supports standalone models and coupled setups
- One software to rule them all
- Adequate for **educational purposes** (easy-to-run ESMs) and **research** (highly modular and **flexible**)

# 1 Supported Models & Couplings, Partners

Coupled Systems	Components
AWI-CM1	ECHAM
AWI-CM3	FESOM
AWI-ESM-2.1	ICON
FESOM-REcoM	NEMO
FOCI	OASIS3MCT
FOCI-OIFS	OpenIFS
	PISM
	REcoM
	RNFMAP
	VILMA
	xios
	YAC

#### **ESM-Tools workflow**

- 1. Obtain the model source code (usually a tar ball)
- 2. Build the model
  - 1. configure
  - 2. make
  - FAIL: Read the HPC documentation and repeat (libraries, ccopilers, modules, ...)
- 3. Prepare the data folders (input, boundary conditions, output, ...)
- 4. Setup the namelist for the models
- 5. Submit your job to the HPC system
  - Warning: environment mismatch
- 6. Resubmit / Iterative coupling
- 7. Move the data to the storage disk
- 8. Postplecessing of the results

Repeat the whole process for the next run or write a shell script for automatization.

- Obtain and build the model code (from a repository)
  - Uniform environment for both installation and running→ guaranteed integrity.

```
esm_master install-awicm3-v3.1
```

- Prepare YAML based runscript
- [OPTIONAL] Check if your run would run successfully:

  esm runscripts my awicm runscript.yaml -e my first test -c

• **Submit** your job to the system:

```
esm_runscripts my_awicm_runscript.yaml -e my_first_test
```

- Monitor your log files
- Postprocess the results (esmviz, in progress)

#### **Old Workflow**

VS

#### **ESM-Tools** workflow

```
echam prepare forcing()
         # forcing
         if [[ "v$setup name" = "vecham standalone" ]]; then
                   case $SCENARIO_echam in
                           1850 | PI-CTRL*)
                                     add_to ${echam_INPUT_DIR}/${RES_echam}/${RES_echam}${OCERES_echam}_piControl-LR_sst_1880-2379.nc unit.20
                                     add_to ${echam_INPUT_DIR}/${RES_echam}/${RES_echam}$fOCERES_echam}_piControl-LR_sic_1880-2379.nc unit.96
                           HIST )
for ((yr = YR0_echam + -2; yr <= YRN_echam + 2; ++yr)); do</pre>
         if [ $yr -le 1849 ] ; then
                   eval add to ${echam INPUT DIR}/${RES echam}/ozone/$ozonefile 1850 ozon$yr
         elif [ $yr -le 2014 ] ; then
                   eval add_to ${echam_INPUT_DIR}/${RES_echam}/ozone/$ozonefile_hist ozon$yr
                   eval add_to ${echam_INPUT_DIR}/${RES_echam}/ozone/$ozonefile_scen ozon$yr
         fi
         if [ $yr -le 1849 ] ; then
                   \verb|add_to| $\{echam_INPUT_DIR\}/\\ $\{RES_echam\}/volcano_aerosols/strat_aerosol_ir_\\ $\{RES_echam\}_1850.nc strat_aerosol_ir_\\ $\{yr\}.nc strat_aerosol_ir_\} $\{instruction for the properties of the pr
                   add to ${echam INPUT DIR}/${RES echam}/volcano aerosols/strat aerosol sw ${RES echam} 1850.nc strat aerosol sw ${yr}.nc
         elif [ $yr -le 2024 ] ; then
                   add_to ${echam_INPUT_DIR}/${RES_echam}/volcano_aerosols/strat_aerosol_ir_${RES_echam}_${yr}.nc strat_aerosol_ir_${yr}.nc
                   add_to ${echam_INPUT_DIR}/${RES_echam}/volcano_aerosols/strat_aerosol_sw_${RES_echam}_${yr}.nc strat_aerosol_sw_${yr}.nc

## 1) Contact & Community

https://github.com/esm-tools

- https://github.com/esm-tools/esm\_tools/discussions
  https://github.com/esm-tools/esm\_tools/issues

https://esm-tools.readthedocs.io

https://www.esm-tools.net

@ToolsEsm

https://gmd.copernicus.org/articles/14/4051/2021/

Barbi et. al., GMD (2021): https://doi.org/10.5194/gmd-14-4051-2021

Zenodo: https://doi.org/10.5281/zenodo.5787476

## 2 Let's Get Started: Installation

https://esm-tools.readthedocs.io

- cd to your \${HOME} directory
- In your .bash\_profile or .bashrc add:

```
export PATH=${PATH}:~/.local/bin
export LC ALL=en US.UTF-8
export LANG=en_US.UTF-8
```

```
module load git
module unload netcdf_c #(only on ollie)
module load python3
```

```
source .bash_profile
source .bashrc
```

git clone https://github.com/esm-tools/esm\_tools.git

cd esm\_tools ./install.sh

This will install ESM-Tools and all of the dependencies

esm tools --version

Verify the installation

## 2 Let's Get Started: Installation

In case you already have esm\_tools, but not the latest release version

Stash your local changes (or commit and push)

```
cd ~/esm_tools
git stash
```

2 Pull the latest updates from the online repository

```
git pull
```

3 Check out the release branch

```
git checkout release
```

After the workshop is over, switch back to your branch and apply stashed changes

```
git checkout your_branch
git stash apply
```

## Were you able to log in and install?
